A. Summary
This section contains design criteria for architectural woodwork, including the installation of shop-fabricated exposed woodwork and casework.

B. Certification Requirements
Manufacturers must be AWI-certified.

C. Shop Drawings
Shop drawings must:
- Indicate the physical dimensions and details or profiles of all elements of the work, including the location of different grades, species, and/or finishes.
- Provide dimensions, details, and specific directions for all blocking required for installation
- Indicate dimensions, details, and specific directions for all cutouts or easements required for equipment, accessories, utilities, or service access.

D. Product Standards
Architectural woodwork products must conform to AWI quality standards, custom-grade, unless otherwise indicated or approved

E. Materials
Architectural woodwork materials must conform to the following standards.
1. **Wood Species**
   a. With transparent finishes, use the hardwood species required by the designer or a species that matches the existing hardwood.
   b. With painted finishes, use a closed-grain hardwood suitable for the exposure and loading.
   c. With laminate backings, use at least 45 lb density particleboard.

2. **Veneer Matching**
   Use the veneer required by the designer or a veneer that matches the existing veneer.

3. **Plastic Laminate**
   Use NEMA LD-3, 0.050" thick horizontal-grade plastic laminate at exposed surfaces. Use 0.020" thick horizontal-grade laminate at semi-exposed parts, such as cabinet liners. The designer will select the color, texture, and pattern.

4. **Solid Surfacing**
   Use Dupont™ Corian® solid surfaces or an approved equivalent.

5. **Casework and Counters**
   a. With transparent, painted, or plastic laminate finishes, use AWI custom-grade wood.

   b. Wood Cabinets – Yale School of Medicine
      Grade: Custom
      Wood Species for Exposed Surfaces:
      Project dependent (for transparent finish).
      Any close-grained hardwood listed in reference woodworking standard (for opaque finish).

      Grain Matching:
      Run and match grain horizontally for drawer fronts, vertically for doors and fixed panels. Matching of Veneer Leaves: Book Match.
      Veneer Matching within Panel Face: Running Match.

   c. Laminate Clad Cabinets – Yale School of Medicine
      Grade: Custom
Laminate Grade for Exposed Surfaces:
Thickness: 0.050”, unless otherwise specified. Edges: GP-50 (0.050”, nominal thickness).

Laminate Grade for Cabinet Interior Surfaces:
Duralam; melamine 6-10 mil sheet rolled onto luan core plywood. Provide on all laminate clad casework cabinet interiors.

Laminate Backing Sheet for Non-Visible Surfaces:
LD-3 BK20 Backing Grade:
Undecorated plastic laminate. Provide backing under all counter tops and other non- visible surfaces so that a "balanced construction" between the non-visible and exterior/interior laminate casework exists throughout the casework project.

6. Hardware
   a. Hardware – General
      Use brass or stainless steel hardware.
   b. Hardware - Yale School of Medicine
      Anchors:
      Interior Masonry Walls:
      Appropriately sized fiber/lead solid wall anchor, Rawl or equal. No plastic.
      Hollow Wall Anchor:
      Appropriately sized wing or metal expansion anchor (toggle or equal).
      Drawer Slides:
      Premium quality, full extension, ball-bearing, nylon, double-track rated for 100 pound load in normal usage.
      Locks:
      Where cabinet and drawer locks are required, use Best 5LX Hand, or Best 5E.
      Full ball-bearing carriers; zinc-plated steel #992ZC. Manufacturer K&V or equal.

7. Glass, Doors, and Shelves
   a. Use tempered safety glass.
   b. Shelving - Yale School of Medicine:
      Core: 1" high density particle board or 1" plywood.
      Finish: Heavy duty plastic laminate finish on all six surfaces. (Self edging materials on edges is acceptable.)
8. Finishes
   a. For transparent finishes, use:
      • Catalyzed polyurethane
      • AWI finish system TR-6
      • Custom-grade
   b. For opaque finishes, use:
      • Catalyzed vinyl
      • AWI finish system OP-5
      • Custom-grade

9. Fire-Retardant Treatment
   Where required by code or local authorities, use ASTM E 84, Class A fire-retardants. The vehicle for the fire-retardant preservative must be compatible with the finish.
